

NGUYỄN THÀNH TÂM

DATA ANALYST

Ho Chi Minh City, Vietnam | tam43621@gmail.com
<https://github.com/nguyenthanhtam101> | 0923074610

OBJECTIVE

Aspiring Data Analyst passionate about leveraging Python for data cleaning and SQL for efficient database querying. Experienced in building interactive Power BI reports and advanced Excel models to drive business growth. Successfully executed an end-to-end RFM project, demonstrating a strong ability to translate raw data into strategic recommendations. Dedicated to transforming complex data into actionable business growth strategies.

EDUCATION

Thuy Loi University

2022 - 2026

Major : Information Technology (Expected Graduation: 2026).

Achievements: Received scholarships to encourage learning and achieved excellent student titles for many terms

GPA : 3.22 / 4.0

Certificate : Toeic 605/990

TECHNICAL SKILLS

- Programming Languages: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (Joins, CTEs, Window Functions).
- Data Analysis & Visualization: Excel (Basic Formulas, Pivot Tables, Dashboarding), Power BI (DAX, Power Query), RFM Modeling.
- Databases & Data Platforms: MongoDB (Aggregation Framework), Postgres, Git, Docker (Containerization).
- Data Engineering & Processing: ETL / Data Pipelines, Data Cleaning, Data Transformation.
- Machine Learning: TensorFlow, Deep Learning (DNN, CNN), Model Development.

PROJECTS

AI-POWERED STROKE PREDICTION (EHR & MEDICAL IMAGING)

- Integrated and processed diverse data sources: structured EHR (Electronic Health Records) and unstructured brain scan images.
- Utilized XGBoost to analyze patient records and identify critical risk factors (feature importance).
- Built and deployed an interactive web app using Streamlit to present risk predictions to non-technical users .
- Technologies: Python, Pandas, Scikit-learn, XGBoost, TensorFlow (ResNet50), Streamlit.

OLIST E-COMMERCE CUSTOMER SEGMENTATION

- Data Processing: Engineered a complex 5-stage MongoDB Aggregation Pipeline to cleanse and integrate over 90,000 records from three disparate collections (Orders, Payments, Customers).
- Modeling: Implemented an RFM Analysis model (Recency, Frequency, Monetary) to segment the customer base into 6 distinct behavioral clusters, such as Champions, At Risk, and Hibernating.
- Business Insight: Uncovered a critical revenue imbalance where 80% of revenue stemmed from one-time buyers; proposed a data-driven "Retention First" strategy to maximize Customer Lifetime Value (LTV).
- Technologies: MongoDB Compass (Aggregation Framework), Microsoft Excel (Pivot Tables, Advanced Formulas, Dashboarding), GitHub.
